

# LED Rebates and Incentives for Cultivators

LED rebate programs help businesses recoup a percentage of the amount spent on energy-efficient lighting. These rebates are significant, typically covering tens of thousands of dollars invested in these new products.

## WHY SWITCH TO LEDS?

- LEDs are more energy efficient than HPS
- Many cannabis and hemp grow operations are subject to energy regulations
- LEDs generate less heat than HPS
- LED installation = significant, long-term savings

## AGRIFY WILL HELP YOU:

- Determine eligibility + identify programs
- Verify and review preliminary incentives
- Work with utility experts to fill in details necessary to evaluate your application
- Learn what is required for pre-audits and audits to evaluate your facility for a rebate

## CUSTOMER LED REBATE TESTIMONIAL

- WA state customer installed Agrify's LED lights totaling \$93,986
- Received \$48k+ back, a CAPEX reduction of 45%+
- Agrify's LEDs are expected to save this facility between 40% and 50% off their monthly energy bill, compared to when the facility relied on HPS lighting
