

Take your grow to the next level.

Agrify's software integration empowers growers to successfully cultivate cannabis by applying data science and a continuous improvement process to every aspect of the production. Our Vertical Farming Units come with integrated control systems enabling higher consistency and forecasting of yields, cannabinoids, and terpene production.

Fully Integrated Cultivation System

Optimal # of plants and strain-specific grow plans for max yield.

Cultivation Software that Performs

Remotely monitor every part of your grow environment.

Complete Growing Solutions

Optimize yield with weekly harvesting & staggered growth cycles.

Data-Driven Insights

Actionable data, real-time monitoring, and alerts.

Automated and Optimized Workflow

Complete ERP system with role-based dashboards to minimize human errors.

Precision Monitoring and Controls

Integrated live cameras with automated temperature, humidity, lighting, CO2, irrigation, & fertigation parameters.

Grow Consistently. Grow Precisely. Grow Smarter.
